Art Unit: 1711

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 2, 12, 14, 24, 35 and 36 are rejected under 35 U.S.C. 102(b) as being anticipated by Hedrick et al., Macromolecules 1997,30, 7607-7610.

Hedrick discloses a "cured" composition (last complete paragraph on page 7609) containing a hyperbranched polyether polymer having "reactive groups" (last paragraph of the article prior to "Acknowledgment") and a "linear double chain ladder polymer" "7" having (reactive) silanol end groups (paragraph bridging the columns on page 7609).

The terminal disclaimer filed on 1-31-2006 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of US patent 6,812,298 has been reviewed and is accepted. The terminal disclaimer has been recorded.

The terminal disclaimer filed on 1-31-2006 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of US patent 6,646,089 has been reviewed and is accepted. The terminal disclaimer has been recorded.

The terminal disclaimer filed on 1-31-2006 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of US patent 6,534,600 has been reviewed and is accepted. The terminal disclaimer has been recorded.

The declaration under 37 CFR 1.132 filed 1-31-06 is insufficient to overcome the rejection of claims 2, 12, 14, 24, 35 and 36 are based upon Hedrick et al. as set forth in the last Office action because: Hedrick specifically disclose that the nanoscopic phase separation

Art Unit: 1711

attained (as opposed to the "gross phase separation" exhibited by benzoyl terminated hyperbranched polymer) was attainable by "employing reactive groups" such as triethoxysilyl (see the last two paragraphs of the article). Such gross phase separation is disclosed to be due to "decreasing the amount of interaction between the organic hyperbranched component and the inorganic silsesquioxane matrix as the chain end is varied from triethoxysilyl to phenolic to benzoyl". Thus while Hedrick may imply that largely hydrogen bonding exists between the benzoyl terminated hyperbranched polymers, he implies that a covalent interaction results from use of triethoxysilyl end units by use of the word "reactive". This alone is enough to provide a prima facie case of anticipation of the instant claims. However note further that curing is said to take place above 180 degrees centigrade at the last complete paragraph on page 7609 in order to "prevent large scale phase separation". However large scale phase separation (such as occurs in the benzoyl and phenolic OH terminated hyperbranched polymer containing compostions but not in the triethoxysilyl terminated ones) does not reasonably appear preventable based on use of hyperbranched polymers soley capable of hydrogen bonding as hydrogen bonding is known to be ineffective at the high temperatures at which the materials are formed as referred to in the last complete paragraph on page 7609 of the article. Note in this re Dubroca (US 4,646,400) at the sentence bridging columns 11 and 12 as well as Chino at paragraph 188.

Application/Control Number: 09/888,736

Art Unit: 1711

Applicant's arguments filed 2-7-06 have been fully considered but they are not persuasive.

Applicants' arguments merely renew those of applicants in applicants' declaration. However, the

defects in applicants' declaration are set out above.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time

policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE

MONTHS from the mailing date of this action. In the event a first reply is filed within TWO

MONTHS of the mailing date of this final action and the advisory action is not mailed until after

the end of the THREE-MONTH shortened statutory period, then the shortened statutory period

will expire on the date the advisory action is mailed, and any extension fee pursuant to 37

CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

however, will the statutory period for reply expire later than SIX MONTHS from the mailing

date of this final action.

Any inquiry concerning this communication should be directed to Jeffrey C. Mullis at telephone

number 571 272 1075.
